TECHNICAL CONSULTANCY ACTIVITIES, RESEARCH AND ADVANCED SERVICES

ACTISA S.L. provides an **advanced technical consultancy profile** in civil engineering and architecture and adapted to the new demands of society. ACTISA carries out technical assistances to support public and private organizations, using new available technologies and techniques or making possible the generation of new research lines or new developments.

www.actisa.net

ACTISA's services are of great social interest, allowing a best feasibility analysis of new infrastructures or new services and making possible its optimization.

In addition to consultancy services the company manages two high technology business lines: own artificial intelligence software applied to civil engineering and transport and discontinuous structures and pavements, (own patents). Moreover, the company has expertise in the management and construction of electric car chargers.

ACTISA highlights due to its clear social vocation, and its contribution to the defence of natural wealth, the heritage and social welfare.
